

Walker Avenue Nursery

Plants for Wet Places

Ponds Water Gardens Backyard Wetlands Native Restoration Rain Gardens Gray Water Filters

Walker Avenue Nursery is dedicated to growing quality wetland, riparian, & pond plants. For pond environments, we grow hardy water lilies, lotus, floating & oxygenating plants, and emergent bog plants. We also grow California Native and ornamental plants, trees, and shrubs for backyard habitats, pond edges, wetlands and moist woodlands. Our plants are especially suited for wet habitats, including rain gardens, bio swales, gray water systems, and water features.

Our broad inventory of aquatic plants is grown in 4" to 15-gallon containers. We also grow natives in treepots and large plugs. Submerged plants are prepared in aquatic soil for immediate planting in a pond or marsh. Our plants are irrigated with 100% reclaimed water, and free of synthetic pesticides and fertilizers, so they will have no adverse effect on the water chemistry or on wildlife, pets, children. Contract growing available. We offer delivery within 150 miles of our nursery. Pick up by appointment only.

Thank you for choosing Walker Avenue Nursery

Debbie & Daniel

RETURN/EXCHANGE POLICY

All requests to return or exchange plants must be made within 48 hours of delivery to orders@walkeravenuenursery.com. Authorized returns are subject to a 20% re-stocking fee. We will not accept or replace plants which have died due to neglect or abuse. Please save all plants in their original containers and keep them wet. Overgrown plants may be exchanged upon request.

We separate our water plants into six general categories.

Plants are identified by type in our catalogue and on our retail tags.

Floating
Submerged
Emerging
Bog
Marginal
Landscape

Floating wetland plants float free on the surface of the water with roots dangling in the water

Submerged plants must be below the water surface of a pond—leaves will float on or above water surface. Submerged plants cannot survive out of the water.

Emerging plants have their roots and part of their stems below the water surface, and their leaves and flower above the water surface. They can be planted from 2-6" below the water surface or in an area of the garden that is most always moist. Do not fully submerge.

Bog plants can be planted 2" below the water surface or in an area of the garden that is most always moist (these are called "Marsh Gardens"). This is the largest variety of water plants available. Do not fully submerge but keep wet at all times, in mud or sand.

Marginal plants grow at the interface of wetland and upland habitats. They prefer changing water levels and develop their roots as the water rises over their root ball and recedes.

Landscape water plants cannot be planted directly in a pond. They are landscape plants that like wet to very-wet soil. Do not submerge.

Plants are separated into tiers for pricing. Please contact us for price quote.
